

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (previously amended) A method of searching resources on the web, comprising:
receiving a search query to search for information on the web;
accessing one or more web pages and one or more subsets of one or more web pages, the subsets having been extracted from the one or more web pages prior to receiving the search query, the subsets extracted responsive to one or more views, the one or more views defined independently of the search query, wherein the views are content-sensitive filters that specify which sub-parts of a web page a user is interested in;
prior to receiving the search query, storing the subsets in a database;
responsive to the search query, identifying at least one of one or more of the extracted subsets of one or more web pages stored in the database, the search query used as a criterion for identifying at least one of the one or more subsets.
2. (previously amended) The method of claim 1, wherein the views are capable of identifying desired portions of the web pages when the respective web pages evolve.
3. (previously amended) The method of claim 1, wherein the subsets include one or more web pages and one or more selections, one or more selections including one or more subsets of one or more web pages.
4. (currently amended) A method of searching electronic resources including markup language, comprising:
receiving criteria for filtering of data; and
responsive to the criteria, identifying one or more sequences of a plurality of predefined views that can be applied to one or more electronic documents, the electronic documents including markup language, each predefined view in one or more sequences of views and each view of one or

~~more views among the plurality of pre-defined views~~ including instructions, the instructions operating on the one or more electronic documents, the instructions specifying methods for selecting one or more subsets of the one or more electronic documents;

wherein the views are content-sensitive filters that specify which sub-parts of an electronic document ~~a web page~~ a user is interested in.

5. (previously amended) The method of claim 4, wherein the views are capable of identifying desired portions of the electronic documents when the electronic documents evolve.

6. (previously amended) The method of claim 4, wherein, at least one view of the plurality of predefined views includes one or more links to one or more views of the plurality of predefined views, the one or more links allowing at least two of the plurality of predefined views to be accessed sequentially.

7. (previously amended) The method of claim 4, wherein the electronic documents comprise web pages.

8. (previously amended) The method of claim 4, wherein the subsets include one or more electronic documents and one or more selections, the one or more selections including one or more subsets of one or more electronic documents.

9. (currently amended) A method of searching electronic resources, comprising:
receiving criteria for filtering of data; and
responsive to the criteria, identifying one or more sequences of a plurality of pre-defined views that can be applied to one or more electronic documents, ~~in one or more sequences of views and each pre-defined view of one or more views among the plurality of pre-defined views~~ including instructions, the instructions operating on the one or more electronic documents, the instructions specifying methods for selecting one or more subsets of the one or more electronic documents;
wherein the views are content-sensitive filters that specify which sub-parts of an electronic document a user is interested in.

10. (previously amended) The method of claim 9, wherein the views are capable of identifying desired portions of the electronic documents when the electronic documents evolve.
11. (previously amended) The method of claim 9, wherein, at least one view of the plurality of one or more predefined views includes one or more links to one or more views of the plurality of one or more predefined views, the one or more links allowing at least two of the plurality of one or more predefined views to be accessed sequentially.
12. (previously amended) The method of claim 9, wherein the electronic documents comprise web pages.
13. (previously amended) The method of claim 9, wherein the subsets include one or more electronic documents and one or more selections, one or more selections including one or more subsets of one or more electronic documents.

Claims 14-23 (canceled)

24. (previously presented) A computerized system for searching, the system comprising:
 - a view repository;
 - a database;
 - means for receiving a search query;
 - means for accessing one or more documents and one or more subsets of one or more documents, the subsets having been extracted from the one or more documents prior to receiving the search query, the subsets extracted responsive to one or more views, the one or more views defined independently of the search query and stored in the view repository, wherein the views are content-sensitive filters that specify which sub-parts of a document a user is interested in;
 - means for, prior to receiving the search query, storing the subsets in the database;
 - means for, responsive to the search query, identifying at least one of one or more of the extracted subsets of one or more documents stored in the database, the search query used as a criterion for identifying at least one of the one or more subsets.

25. (previously presented) The system of claim 24, wherein the views are capable of identifying desired portions of the electronic documents when the respective electronic documents evolve.
26. (previously presented) The system of claim 24, wherein the documents comprise web pages.
27. (previously presented) A method of searching resources on a network, comprising:
receiving a search query to search for information on the network;
accessing one or more electronic documents and one or more subsets of one or more electronic documents, the subsets having been extracted from the one or more electronic documents prior to receiving the search query, the subsets extracted responsive to one or more views, the one or more views defined independently of the search query, wherein the views are content-sensitive filters that specify which sub-parts of an electronic document a user is interested in;
prior to receiving the search query, storing the subsets in a database;
responsive to the search query, identifying at least one of one or more of the extracted subsets of one or more electronic documents stored in the database, the search query used as a criterion for identifying at least one of the one or more subsets.
28. (previously presented) The method of claim 27, wherein the views are capable of identifying desired portions of the electronic documents when the respective electronic documents evolve.
